

Service Manual

Microwave Oven

NE-3280
NE-2180
NE-2180C

Specifications

	NE-3280	NE-2180, NE-2180C
Power Source :	230/208 V AC Single Phase, 60Hz	
Power Requirement :	25.3/ 28A	18/ 20A
High frequency Output :	HIGH3200 W(IEC705-88) MED1600 W LOW340 W DEF170 W HOLD0 W	HIGH2100 W(IEC705-88) MED1050 W LOW340 W DEF170 W HOLD0 W
Oscillation Frequency :	2450 MHz	
Timer :	15 min. HIGH and MED power for single stage. 60 min. LOW, DEFROST and HOLD power for single stage.	
Outside Dimensions :	25-9/16" (W) × 20-3/4" (D) × 18-9/16" (H) 650 mm (W) × 526 mm (D) × 471 mm (H)	
Oven Cavity Dimensions :	21-1/16" (W) × 13" (D) × 9-7/8" (H) 535 mm (W) × 330 mm (D) × 250 mm (H)	
Weight :	136.4 lbs(62 kg)	116.6 lbs(53 kg)
Specification subject to change without notice.

⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

WARNING

1. This product should be serviced only by trained qualified personnel.
2. Though this product has been manufactured in compliance with:
 - "Federal Performance Standard 21 CFR Subchapter J" (D.H.H.S.): U.S.A. models
 - or "Radiation Emitting Devices Act" (Health and Welfare Canada): Canadian models
 It is very important all repairs should be made in accordance with procedures described in this manual to avoid being exposed to excessive microwave radiation.
3. Check for radiation leakage before and after every servicing according to the "procedure for measuring radiation leakage".
4. If the unit cannot be repaired on site, advise the customer not to use until unit be repaired.
5. Any serviceman who learns of any accident pertaining to microwave radiation leakage including the oven operating with open door should immediately notify the appropriate address listed below and Center for Devices and Radiological Health, DHHS.

6. There are special components used in the microwave oven which are important for safety. These parts are marked with a ⚠ on the replacement parts list. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent microwave leakage, shock, fire, or other hazards. Do not modify the original design.

PRECAUTIONS TO BE OBSERVED BEFORE AND DURING SERVICING TO AVOID POSSIBLE EXPOSURE TO EXCESSIVE MICROWAVE ENERGY

- | | |
|--|---|
| <p>(A) Do not operate or allow the oven to be operated with the door open.</p> <p>(B) Make the following safety checks on all ovens to be serviced before activating the magnetron or other microwave source, and make repairs as necessary:</p> <ol style="list-style-type: none"> (1) Interlock operation (2) Proper door closing (3) Seal and sealing surfaces (arcing, wear, and other damage) (4) Damage to or loosening of hinges and latches (5) Evidence of dropping or abuse | <p>(C) Before turning on microwave power for any service test or inspection within the microwave generating compartments, check the magnetron, waveguide or transmission line, and cavity for proper alignment, integrity and connections.</p> <p>(D) Any defective or misadjusted components in the interlock, monitor, door seal, and microwave generation and transmission systems shall be repaired, replaced, or adjusted by procedures described in this manual before the oven is released to the owner.</p> <p>(E) A microwave leakage check to verify compliance with the Federal Performance Standard should be performed on each oven prior to release to the owner.</p> |

2 OPERATION PROCEDURE

1. Manual heating for single stage

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacle.	
2. Open the door. Place a water load in the oven and close the door.	0
3. Tap POWER pad once. (Set to High power)	  HI 0
4. Set the desired heating time by turning the timer dial. (Set to 2 minutes)	  2 00 HI
5. Tap START pad.	  1 59 HI
6. When the time is up, you hear 3 beeps sound.	
7. Open the door and take out the water load. The display goes back to previously setting time.	1  2 00 HI
8. Close the door. 1 minute later, display will return blank.	

2. Manual heating for 2nd or 3rd stage

OPERATION	DISPLAY
1. Follow step 1 to 4 for single stage.	 2 00  HI
2. Tap POWER pad twice. (Set to MED power)	1  0  MED
3. Set the desired heating time by turning the timer dial. (Set to 1 minute)	1  1 00  MED
4. Tap START pad. (1st stage)	 2  59 HI MED
5. When the 1st stage time is up, you hear 1 beep sound. (2nd stage)	 59  MED
6. When the time is up, you hear 3 beeps sound.	
7. Open the door and take out the water load. The display goes back to previously setting time.	1 2  3 00 HI MED
8. Close the door. 1 minute later, display will return blank.	

NOTE: For a 3rd stage heating cycle, select a further power level and time between steps 3 and 4 above.

3. Memory setting for single stage

OPERATION	DISPLAY
1. Display must be blank before programming can begin. Touch PROG pad.	
2. Tap 5 pad. (Set to memory pad 5) NOTE: Previously selected power and time will appear.	
3. Tap POWER pad once. (Set to High power)	
4. Set the desired heating time by turning the timer dial. (Set to 1 minute)	
5. Touch PROG pad again.	
6. 3 seconds after, the display window will go blank.	

TO PROGRAM MEMORY AREA B: Follow steps 1 above. Touch the Memory Shift pad **A►B** and small "B" will appear beneath the flashing "PROG".

Touch the memory pad you wish to program, and the previously selected time and power level will appear in the display window.

NOTE: Once the Memory area B has been selected it cannot be changed back to Memory area A. If you do not require Memory area B, cancel it by touching the cancel pad and begin again.

4. Memory setting for 2nd or 3rd stage

OPERATION	DISPLAY
1. Follow steps 1 to 4 for memory setting for single stage.	
2. Tap POWER pad twice. (Set to MED power)	
3. Set the desired heating time by turning the timer dial. (Set to 2 minutes)	
4. Touch PROG pad again. Heating time is displayed by adding single and 2nd stage heating time.	
5. 3 seconds after, the display window will become blank.	

NOTE: For a 3rd stage heating cycle, select a further power level and dial in a time, between steps 3 and 4 above.

5. Memory pad heating

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacle.	
2. Open the door. Place a water load in the oven and close the door.	0
3. Tap 5 pad.	
4. Tap START pad. (1st stage)	
5. (2nd stage)	
6. When the time is up, you hear 3 beeps sounds.	
7. Open the door and take out the water load.	0
8. Close the door. Display will return blank after 1 minute.	

NOTE: When program is locked, heating can be started automatically by tapping memory pad.

6. To Read the Cycle Counter

OPERATION	DISPLAY
1. Open the door and close.	0
2. While pressing (BEEP) switch, press (PROG) switch. The display shows the number of times the oven has been used.	66 66
3. 3 seconds later, the display will go blank.	

NOTE: Total cumulative number includes programming memory heating and manual heating number of times has been used. Cooking times over 99,999 times will be back 0.

7. To Activate Program Lock

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacle. Do not open the door.	
2. Press and hold (PROG LOCK) switch until the display show "PROG", "P" and "L". (for more than 5 seconds)	
3. Program lock feature now activated.	

8. To Release Program Lock

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacle.	
2. Press and hold (PROG LOCK) switch until the display will show "PROG" and "P". (for more than 5 seconds)	0
3. Program lock feature is now deactivated.	

9. To Select Beep Tone Options

OPERATION	DISPLAY
1. Plug the power supply cord into wall receptacle.	
2. Press PROG switch.	
3. Press BEEP switch.	
4. Select the desired sound loudness level by pressing BEEP switch. Repeated pressing of BEEP switch will lower the loudness and all the way to silent.	
5. Press PROG switch again.	
6. 3 seconds later display window will go blank.	

To select length of tone at end of heating cycle there are 2 options.

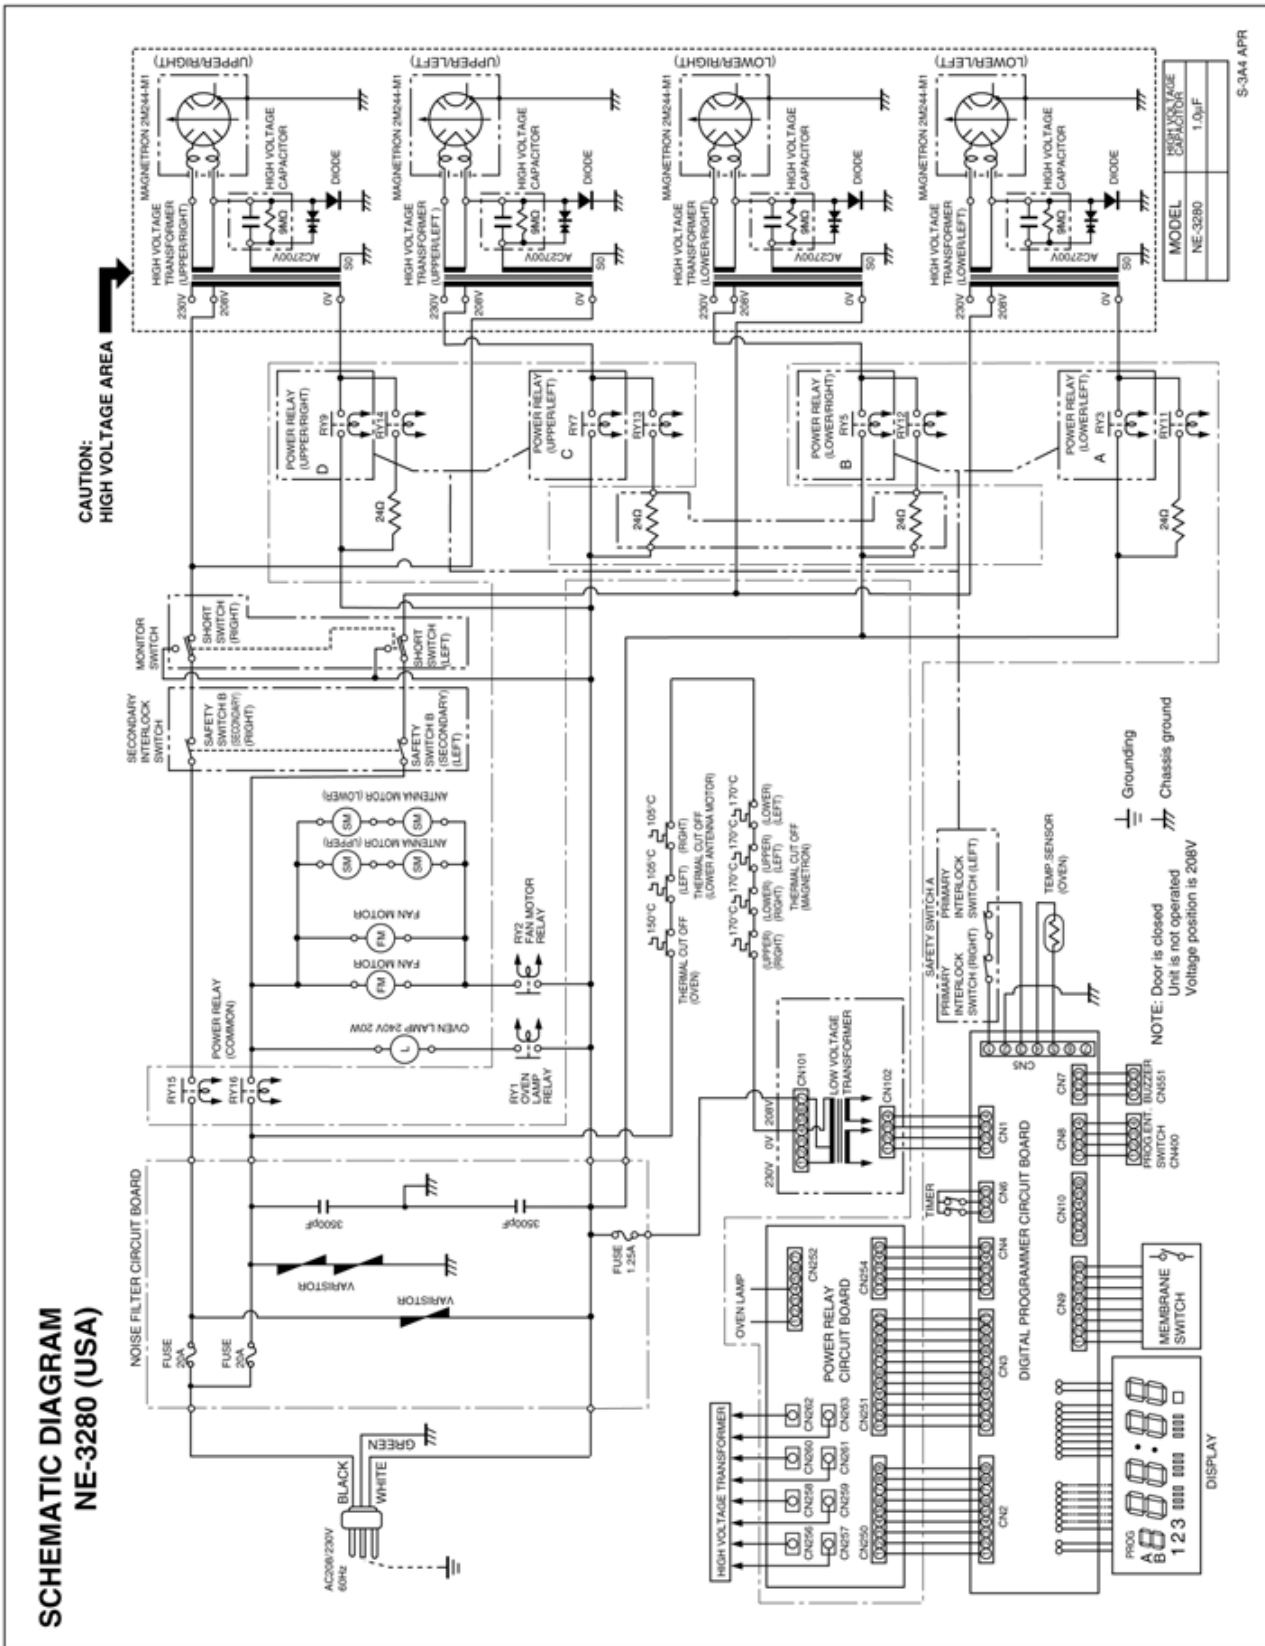

A. 3 beeps (factory setting)

B. 60 seconds of short beeps.

To set for 60 seconds of short beeps.

OPERATION	DISPLAY
1. Complete steps 1-4 above.	
2. Press PROG switch and quickly select the desired tone length by pressing BEEP switch. "1" illuminated 3 beeps. "2" illuminated 60 seconds of beeps.	
3. Press PROG switch again.	
4. 3 seconds later, the display will go blank.	

3 SCHEMATIC DIAGRAM NE-3280 (USA)

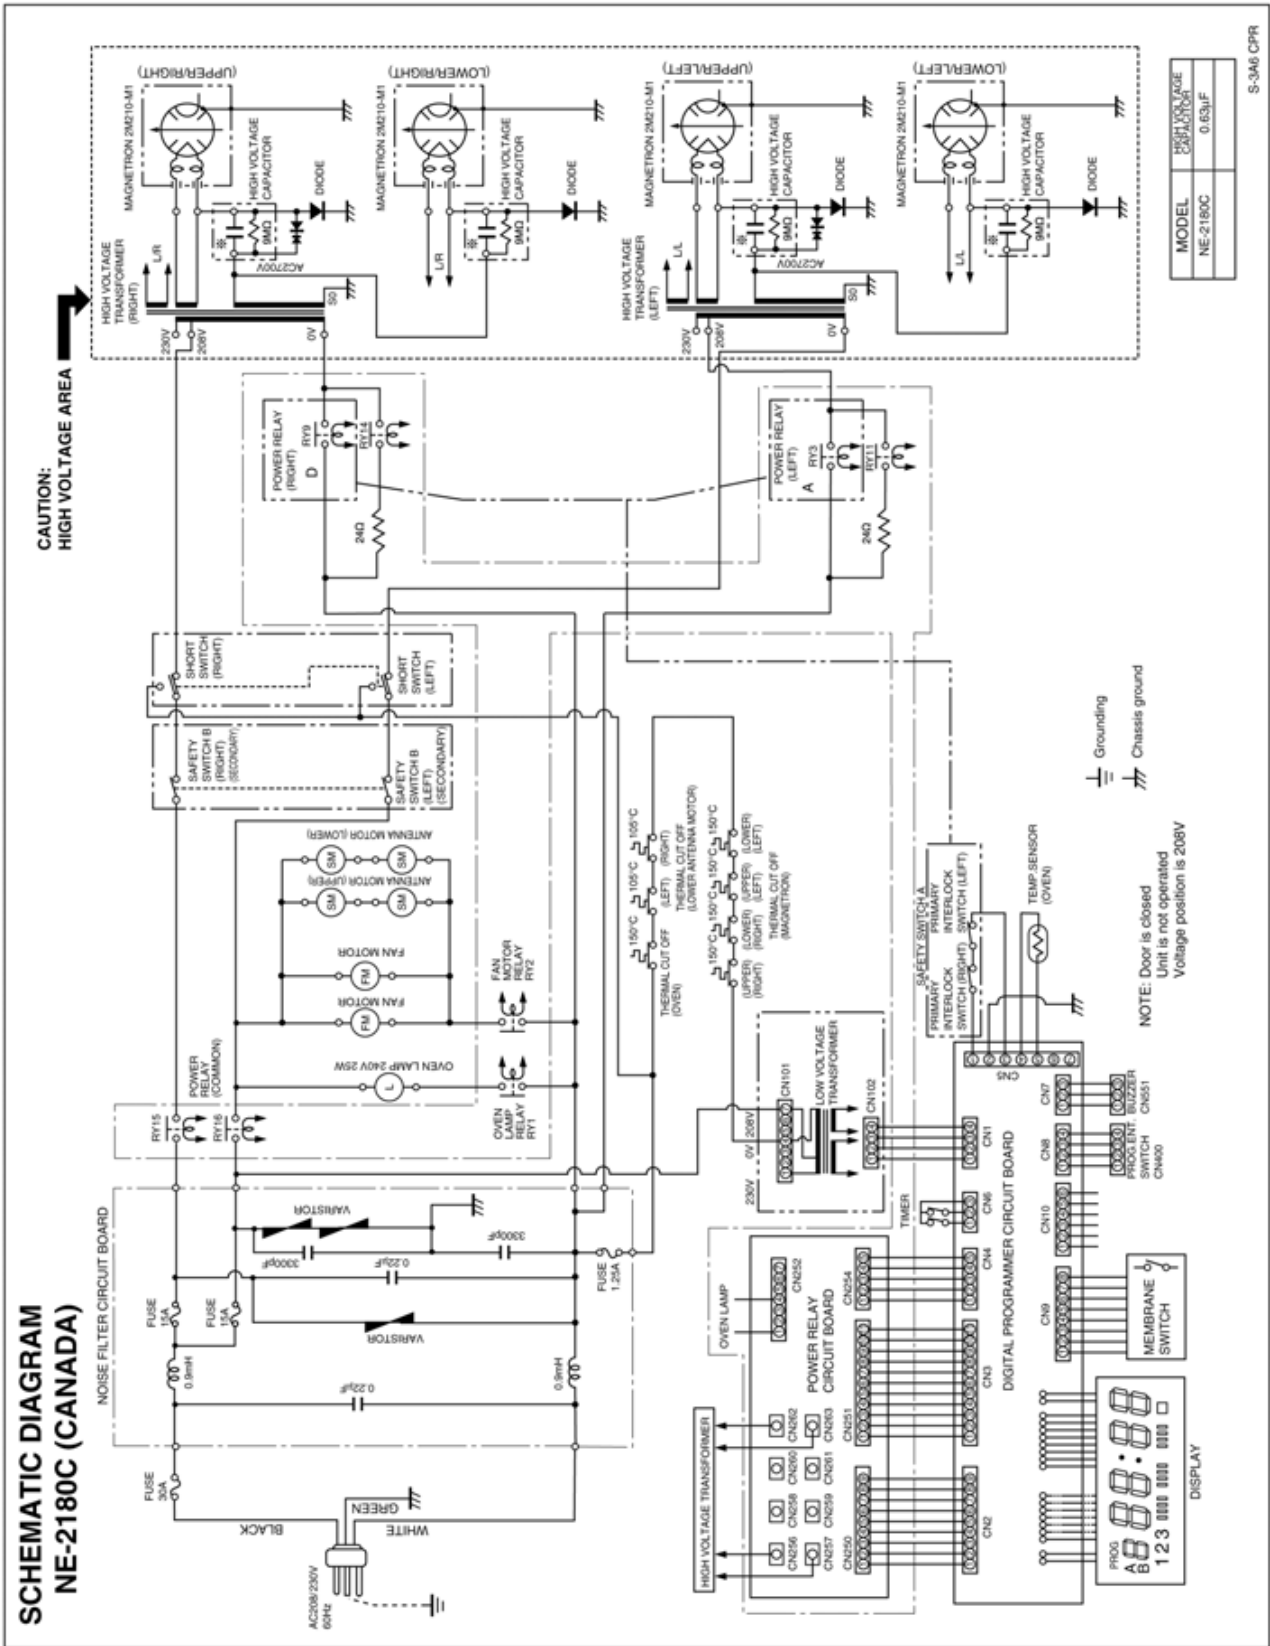

4 WIRING DIAGRAM NE-3280 (USA)

NOTE: When replacing, check the lead wire colour as shown.

8 WIRING DIAGRAM NE-2180 (USA)

NOTE: When replacing, check the lead wire colour as shown.

9 DESCRIPTION OF OPERATING SEQUENCE

Variable power cooking control

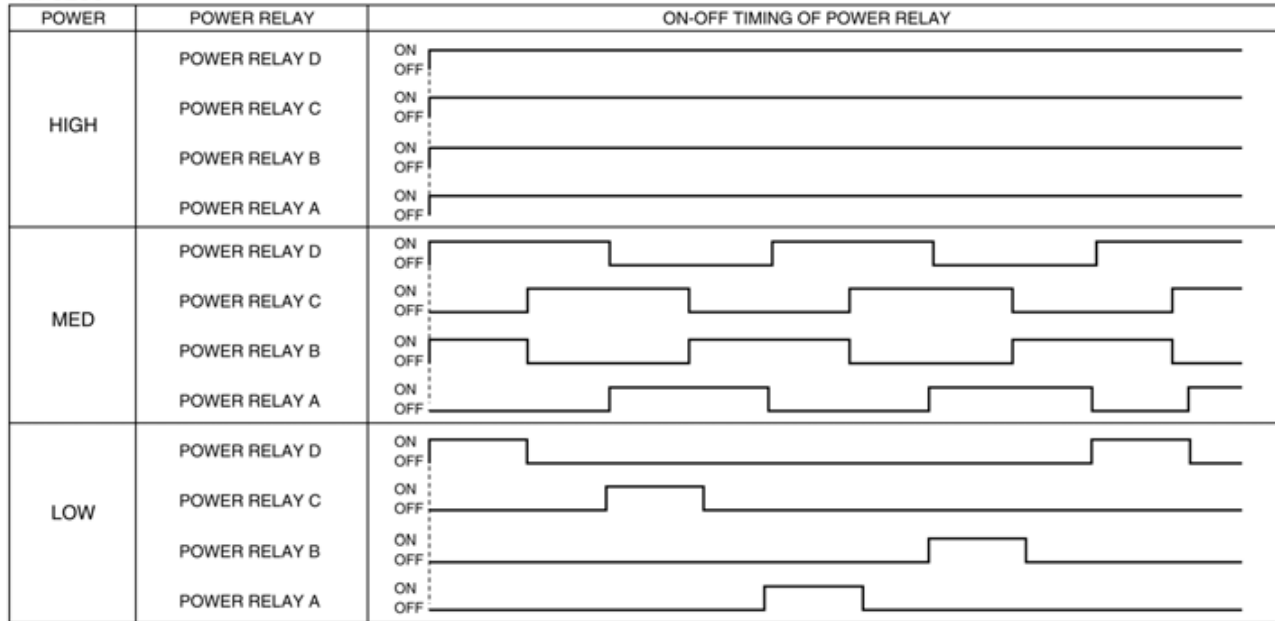

The coil of power relays are energized intermittently by the digital programmer circuit, when the oven is set at any power selection except for High power position. The digital programmer circuit controls the ON-OFF time of the power relays contacts in order to vary the output power of the microwave oven. The relation between indications on the control panel and the output power of the microwave oven is as

shown in table.

NOTE:

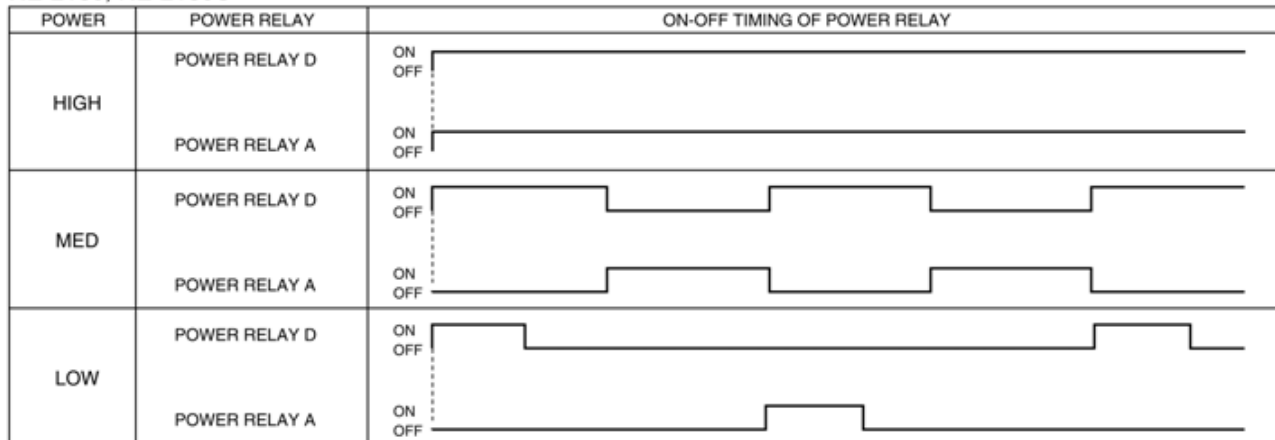

ON-OFF time of power relays are changed by digital programmer circuit when remaining cooking time or selected cooking time are within 8 minutes at MED, LOW and Defrost cooking mode.

NE-3280

96-031M

NE-2180, NE-2180C

96-032M

9.1. Defrost control

When defrost power and defrosting time is selected and Start pad is touched:

1. The digital programmer circuit (DPC) divides the total defrosting time into 8 equal periods, consisting of four defrosting periods, each followed by a standing period. (See figure)
2. During defrosting power periods, power relay ON-OFF time is controlled at Low power mode by DPC.
3. During Standing periods, power relay is always open

resulting in no microwave power.

NOTE:

Defrost time selected is converted into seconds by the DPC but display will show selected time in minutes and seconds as programmed. The total number of seconds is divided into 8 time periods. The remainder (seconds not equally divisible by 8) are added to the last standing time period.

10 CAUTIONS TO BE OBSERVED WHEN TROUBLESHOOTING

Unlike many other appliances, the microwave oven is high-voltage, high-current equipment. Though it is free from danger in ordinary use, extreme care should be taken during repair.

CAUTION

Servicemen should remove their watches whenever working close to or replacing the magnetron.

10.1. Check the grounding

Do not operate on a 2-wire extension cord. The microwave oven is designed to be used when grounded. It is imperative, therefore, to make sure it is grounded properly before beginning repair work.

10.2. Warning about the electric charge in the high voltage capacitor (Figure).

For about 30 seconds after the oven is turned off, an electric charge remains in the high voltage capacitor. When replacing or checking parts, remove the power plug from the outlet and short the terminal of the high voltage capacitor (terminal of lead wire from diode) to chassis ground with an insulated handle screwdriver or insulated jumper lead wire to discharge.

WARNING

There is high-voltage present, with high-current capabilities in the circuits of the high voltage winding and filament winding of the high voltage transformer. It is extremely dangerous to work on or near these circuits with oven energized. DO NOT measure the voltage in the high voltage circuit including filament voltage of magnetron.

WARNING

Never touch any circuit wiring with your hand nor with an insulated tool during operation.

10.3. When parts must be replaced, remove the power plug from the outlet.

10.4. When the 15 Amp. (NE-2180/NE-2180C) or 20 Amp. (NE-3280) fuse is blown due to the operation of interlock monitor, replace the necessary components according to the following table.

10.5. Avoid inserting nails, wire, etc. through any holes in the unit during operation.

Never insert a wire, nail or any other metal object through the lamp holes on the cavity or any other holes or gaps, because such objects may work as an antenna and cause microwave leakage.

10.6. Confirm after repair

1. After repair or replacement of parts, make sure that the screws of the oven, etc. are neither loose nor missing.

2. Make sure that all electrical connections are tight before inserting the plug into the wall outlet.
3. Check for microwave energy leakage. (Refer to procedure for measuring microwave energy leakage.)

— For USA models only —

WARNING — FOR CONTINUED PROTECTION AGAINST EXCESSIVE RADIATION EMISSION REPLACE ONLY WITH THE SAME TYPE COMPONENT MARKED BY "▲" WHEN REPLACING FUSE CHECK OPERATION OF DOOR INTERLOCK AND INTERLOCK MONITOR CIRCUIT AS MARKED BY "▲" AND REPLACE ANY FAULTY COMPONENTS.

U.S.P4942516 (A00333A40AP)

11 DISASSEMBLY AND PARTS REPLACEMENT

CAUTION

Servicemen should remove their watches whenever working close to or replacing the magnetron.

11.1. Magnetrons (Upper and Lower)

Upper magnetrons (Right and Left)

1. Discharge electric charge remaining on the high voltage capacitors.
2. Remove the entire rear panel by removing screws as shown in figure.
3. Disconnect all lead wires from magnetron and thermal cutout.
4. Remove the 4 screws holding magnetron.
5. Remove 2 screws holding thermal cutout.
6. Remove the mounting bracket from magnetron and install it on the new magnetron.

02-051M

Lower magnetrons (Right and Left)

1. Discharge electric charge remaining on the high voltage capacitors.
2. Remove the entire rear panel by removing screws as shown in figure.
3. Disconnect all lead wires from magnetron and thermal cutout.
4. Remove the 4 screws holding magnetron.
5. Remove 2 screws holding thermal cutout.
6. Remove the air guide from magnetron and install it on the new magnetron.

08-064M

NOTE:

To prevent microwave leakage, tighten mounting screws properly making sure there is no gap between the waveguide and the magnetron.

CAUTION

When connecting 2 filament lead wires to the magnetron terminals, be sure to connect the lead wires in the correct position. The lead wire with blue connector should be connected to "FA terminal" and white one should be connected to "F terminal". (See Figure)

11.2. Digital programmer circuit board

1. Remove grounding screw for membrane switch and D.P.C. ground.
2. Remove 2 screws holding control panel assembly to detach it from main unit then remove connectors.
3. Remove 2 screws holding the D.P.C. board and remove the board by freeing catch hooks.

NOTE:

Please use care in handling the power supply P.C.B. and D.P.C. board to avoid damage.

11.3. Low voltage transformer and/or power relays

NOTE:

Be sure to ground any static electric charge built up on your body before handling the DPC.

1. Using solder wick or a desoldering tool and 30W soldering iron, carefully remove all solder from the terminal pins of the low voltage transformer and/or power relays.

NOTE:

Do not use a soldering iron or desoldering tool of more than 30 watts on DPC contacts.

2. With all the terminal pins cleaned and separated from DPC contacts, remove the defective transformer/power relays and install new transformer/power relays making sure all terminal pins are inserted completely. Resolder all terminal contacts carefully.

11.4. Disassembly of door assembly

1. Detach the door spring ends from right and left door arms.
2. Remove the arm lever right and left by removing 2 screws each on both sides.
3. Remove the sashes right and left by removing 1 screw each on both sides.
4. By holding the door assembly, remove the right and left sides door hinge pins. The door assembly is now free from the oven.
5. Remove 3 screws holding the door A.
6. Remove the door C by using a flat screwdriver as figure.
7. Remove 4 screws holding door handle.
8. Separate door A and door E.
9. Remove the door arms by removing 1 pin each on both sides.

2. Remove 2 screws holding upper antenna assy by inserting screwdriver through the opening on the antenna as shown in figure.

11.6. Lower antenna (Right and Left)

Lower antenna (Right and Left)

1. To remove the floor shelf, insert a screwdriver through the openings on the right and left sides of the oven cavity and carefully lift the floor shelf as shown in figure.
2. Remove 2 screws holding lower antenna assy by inserting screwdriver through the opening on the antenna as shown in figure.

11.5. Upper antenna (Right and Left)

Upper antenna (Right and Left)

1. Remove 8 plastic clips holding ceiling plate and exhaust guides by using flat screwdriver or the like.

11.7. Replacement of temperature sensor (Thermal protector)

1. Cut 2 lead wires at the top of sensor terminals.
2. Remove 2 screws holding temp sensor and replace with new one.
3. Solder the lead wires securely to the sensor terminals.

11.8. Replacement of antenna motors (upper and lower)

1. The upper antenna motor may be removed by disconnecting the lead wire connectors and removing its 2 mounting screws.
2. To remove the lower antenna motor, carefully place the unit on its left side.
3. Remove the motor cover by removing 2 screws and follow same procedure as for upper antenna.

CAUTION

There are two types of antenna motors. Therefore please replace with correct one as showing below.

Upper Antenna Motor	PART NO.: ANE61446030AP (RATED: 120V)
Lower Antenna Motor	PART NO.: A6144-3280 (RATED: 120V)

11.9. Program, Beep and Program Lock switches board. (P.C.Board F assy)

1. Remove air filters.
2. Place the unit on its left side carefully.
3. Peel off panel B.
4. Remove 1 screw holding cover. (Figure)
5. Remove 2 screws holding switch assy.
6. Remove connector and remove 2 screws holding switch board.

11.10. Voltage selection (208V→230V)

1. Remove 1 screw holding voltage selection connector cover.
2. Plug the connector out from white (208V) socket and plug the connector into the black (230V) socket.

12 COMPONENT TEST PROCEDURE

CAUTION

1. High voltage is present at the high voltage terminal of the high voltage transformer during any cook cycle.
2. It is neither necessary nor advisable to attempt measurement of the high voltage.
3. Before touching any oven components, or wiring, always unplug the oven from its power source and discharge the high voltage capacitor.

12.1. Primary Interlock Switch (SAFETY SWITCH A), Secondary Interlock Switch (SAFETY SWITCH B) and Power Relay

1. Unplug the power cable.
2. Unplug lead wire connectors to Power Relay (RY2-16) and verify continuity of the power relay terminals.
3. Unplug lead wire connectors to Primary Interlock Switch and Secondary Interlock Switch.
4. Test the continuity of switches with the door in both open and closed positions with ohm meter (low scale). Normal continuity readings should be as follows.

	Door Opened	Door Closed
Primary Interlock Switch	Ω (open)	0Ω (close)
Secondary Interlock Switch	Ω (open)	0Ω (close)
Power Relays	Ω (open)	0Ω (close)

12.2. Short/Monitor Switch (Both Right and Left)

	Door Opened	Door Closed
NO Terminals	Ω (open)	0Ω (close)
NC Terminals	0Ω (close)	Ω (open)

12.3. High voltage transformer

1. Remove connections from the transformer terminals and

check continuity.

2. Normal (cold) resistance readings should be as follows:

- Secondary winding Approx. 40Ω — 100Ω
- Filament winding Approx. 0Ω
- Primary winding Approx. 0Ω — 3Ω

12.4. High voltage capacitor

1. Check continuity of capacitor with meter on highest OHM scale.
2. A normal capacitor will show continuity for a short time, and then indicate $9M\Omega$ once the capacitor is charged.
3. A shorted capacitor will show continuous continuity.
4. An open capacitor will show constant $9M\Omega$.
5. Resistance between each terminal and chassis should be infinite.

12.5. Magnetron

Continuity checks can only indicate an open filament or a shorted magnetron. To diagnose for an open filament or shorted magnetron.

1. Isolate magnetron from the circuit by disconnecting the leads.
2. A continuity check across magnetron filament terminals should indicate one ohm or less.
3. A continuity check between each filament terminal and magnetron case should read open.

12.7. Membrane key board (Membrane switch assembly)

Check continuity between switch terminals, by tapping an appropriate pad on the key board. The contacts assignment of the respective pads on the key board is as shown in digital programmer circuit.

12.8. Protector diode

1. Isolate the protector diode assembly from the circuit by disconnecting its leads.
2. With the ohmmeter set on the highest resistance scale, measure the resistance across the protector diode terminals. Reverse the meter leads and again observe the resistance reading. A normal protector diode's resistance will be infinite in both directions. It is faulty if it shows continuity in one or both directions.

12.9. Temp sensor (Thermal protector)

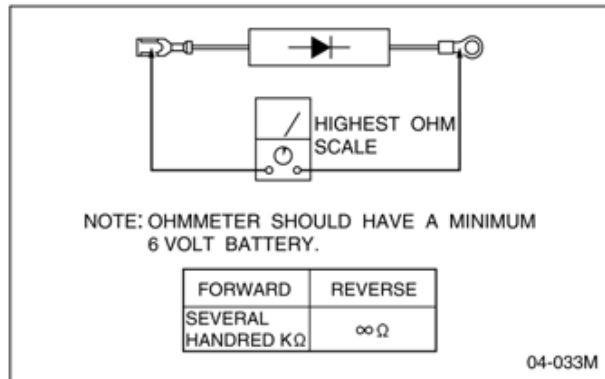

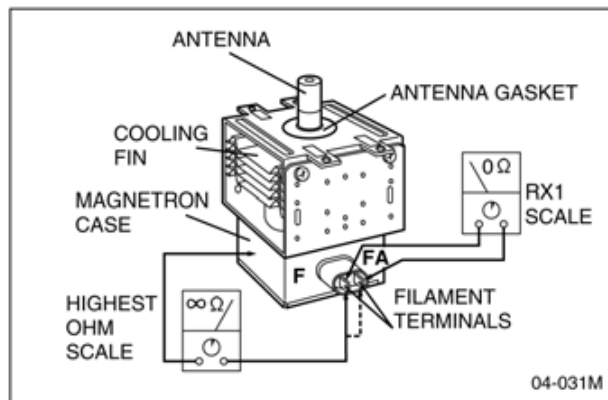

A temp sensor is mounted on exhaust guide. Its purpose is to automatically shut off the oven in case the cavity overheats for any reason.

The thermal protector will operate at 257°F (125°C).

The device is connected to the DPC on touch control models. When the thermal protector exceeds its temperature it will turn off the power to oven cavity and display will go to reset mode. The cooking program can be reset after cool-down.

THERMISTOR RESISTANCE VALUE

30K — 120K at 10°C — 30°C (50°F — 86°F)

12.6. Diode

1. Isolate the diode from the circuit by disconnecting the leads.
2. With the ohmmeter set on the highest resistance scale, measure the resistance across the diode terminals. Reverse the meter leads and again observe the resistance reading. Meter with 6V, 9V or higher voltage batteries should be used to check the front-to-back resistance of the diode, otherwise an infinite resistance may be read in both directions. A normal diode's resistance will be infinite in one direction and several hundred kΩ in the other direction.

13 MEASUREMENTS AND ADJUSTMENTS

13.1. Adjustment of the secondary interlock switch (SAFETY SWITCH B) (Right and Left side)

1. Switch operation

When the door is slightly opened, the secondary interlock switch opens the main circuit. The movement of the door from the closed position to the operation position (shown as liter) of the switch when it opens the main circuit, must maintain within following tolerances.

SECONDARY INTERLOCK SWITCH (liter) = 3 mm — 5 mm
(When secondary interlock switch opens the main circuit)

NOTE:

Make sure that primary interlock switch turns off prior to the secondary interlock switch when the door is gradually opened.

2. How to adjust secondary interlock switch

Loosen 2 screws which secure the secondary interlock switch bracket to the bracket of the oven assembly and then adjust the secondary interlock switch bracket by moving it to either direction as shown in figure.

13.2. Adjustment of the Short Switch (MONITOR SWITCH) (Right and Left side)

1. When the door is slightly opened, the Short Switch opens the main circuit and closes the contacts for short circuit. The movement of door from its closed position to open position at which the Short Switch contacts open the main circuit (shown as liter) must maintain within 8 mm — 11 mm and at which the switch contacts close the short circuit should be 20mm — 35 mm.

2. How to adjust

Loosen the 2 screws holding the short switch to the short switch bracket, and then adjust the safety switch A by moving it to either direction as shown in figure.

— For USA models only —

13.3. Adjustment of the primary interlock switch (SAFETY SWITCH A) (Right and Left side)

1. Switch operation

When the door is slightly opened, the contacts of primary interlock switch opened to give digital programmer circuit the information that the door is open. The allowable movement of the door from the closed position to the operating position (shown as liter) of the switch when it opens the circuit, is specified as follows;

PRIMARY INTERLOCK SWITCH (liter) = 1 mm — 3 mm
(When primary interlock switch opens the circuit)

NOTE:

Make sure that primary interlock switch turn off prior to the secondary interlock switch when the door is gradually opened.

2. How to adjust primary interlock switch

Loosen 2 screws which secure the primary interlock switch bracket to the bracket of the oven assembly and then adjust the primary interlock switch bracket by moving it to either direction as shown in figure.

13.4. Measurement of microwave output

The output power of the magnetron can be determined by performing IEC standard test procedures. However, it is possible to test the magnetron by following procedure outlined below.

Necessary equipment:

- 1 litre beaker
- Glass thermometer
- Wrist watch or stopwatch

NOTE:

Check the line voltage under load to ensure it meets specifications. Low voltage condition will cause a reduction in magnetron output. Temperature readings and heating time, should be as accurate as possible.

Output power performance test procedure.

1. Fill the beaker with exactly one litre of tap water. Stir the water using the thermometer and note the temperature. (Record as T1)
2. Place the beaker in the center of cook plate. Set the oven for High power and heat for exactly one minute.
3. After completion of the heating cycle, stir the water again

14 PROCEDURE FOR MEASURING RADIATION LEAKAGE

WARNING

Check for radiation leakage after every servicing. Should the leakage be more than 2 mW/square centimeter (1mW/square centimeter for Canada) inform PASC, PSC, or PCI immediately. After repairing or replacing any radiation safety device, keep a written record for future reference, as required by D.H.H.S. and Health and Welfare Canada regulation. This requirement must be strictly observed. In addition, the leakage reading must be recorded on the service repair ticket while in the customer's home.

with the thermometer and note the temperature. (Record as T2)

The normal temperature rise (T2 — T1) at High power position for each models is as shown in following table.

Model	Temperature Rise (1 liter — 1 Min.)
NE-3280	Min. 27.4°C
NE-2180 NE-2180C	Min 18°C

NOTE:

The U.S.government standard is 5mw/square centimeter while in the customer's home. 2mw/square centimeter stated here is Panasonic's own voluntary standard.

14.1. Equipment

- Electromagnetic radiation monitor

- Glass thermometer 212°F or 100°C
- 600cc glass beaker

14.2. Procedure for measuring radiation leakage

Note before measuring

1. Do not exceed meter full scale deflection Leakage monitor should initially be set to the highest scale.
2. To prevent false readings the test probe should be held by the grip portion of the handle only and moved along the shaded area shown in Figure right no faster than 1 inch/sec (2.5cm/sec)
3. Leakage with the outer panel removed less than 5mw/square centimeter
4. Leakage for a fully assembled oven with door normally closed less than 2mw/square centimeter
5. Leakage for a fully assembled oven [Before the interlock switch (primary) is interrupted] while pulling the door less than 2mw/square centimeter
1. Pour 275±15cc (9ozs ±1/2oz) of 20 ± 5°C (68 ± 9°F) water in a beaker which is graduated to 600cc, and place the beaker in the center of the oven.
2. Set the radiation monitor to 2450MHz and use it following the manufacturer's recommended test procedure to assure correct results.
3. When measuring the leakage, always use the 2 inch (5cm) spacer supplied with the probe.
4. Press the start button and with the magnetron oscillating, measure the leakage by holding the probe perpendicular to the surface being measured.
1. **Measurement with the outer panel removed.**

Whenever you replace the magnetron, measure for radiation leakage before the outer panel is installed and after all necessary components are replaced or adjusted. Special care should be taken in measuring around the magnetron.

WARNING

Avoid contacting any high voltage parts.

2. Measurements with a fully assembled oven.

After all components, including the outer panel are fully assembled, measure for radiation leakage around the door periphery, the door viewing window, the exhaust opening and air inlet openings.

14.3. Record keeping and notification after measurement

1. After any adjustment or repair to a microwave oven, a leakage reading must be taken. Record this leakage reading on the repair ticket even if it is zero. A copy of this repair ticket and the microwave leakage reading should be kept by repair facility.
2. Should the radiation leakage be more than 2mw/square centimeter after determining that all parts are in good condition, functioning properly, and genuine replacement parts as listed in this manual have been used, immediately notify PASC or PSC.

14.4. At least once a year, have the radiation monitor checked for calibration by its manufacturer.

15 TROUBLESHOOTING GUIDE

CAUTION

1. Check grounding before checking for trouble.
2. Be careful of the high voltage circuit.
3. Discharge high voltage capacitor.
4. When checking the continuity of the switches or the high voltage transformer, disconnect one lead wire from these parts and then check continuity with the AC plug removed. To do otherwise may result in a false reading or damage to your meter.
When disconnecting a plastic connector from a terminal, you must hold the plastic connector instead of the lead wire and then disconnect it, otherwise lead wire may be open or the connector cannot be removed.
5. Be sure to ground any static electric charge built up in your body, before handling the D.P.C.
6. A 208-230V AC is present at the shaded area () of the power supply circuit board (Terminals of power relays and primary circuit of low voltage transformer). When troubleshooting, be cautious of possible electrical shock hazard.

First of all operate the microwave oven following the correct operating procedures described on pages 4 of this service manual in order to find the exact cause of any trouble.

NOTE:

If the unit shows faulty symptom as shown below, check the parts listed in possible cause column depending on failure indication e.g. F81, F82 in the display.

[TROUBLE] Oven does not operate at all or oven does not start cooking. NE-3280

DISPLAY	CONDITIONS	POSSIBLE CAUSE	TIMING OF FAILURE INDICATION
F33	Open temperature sensor (exhaust)	1. Temperature sensor failure 2. Digital programmer circuit failure 3. Loose connector CN5	It is appeared when failure occurred.
F34	Short temperature sensor (exhaust)	1. Temperature sensor failure 2. Digital programmer circuit failure	It is appeared when failure occurred.
F44		1. Shorted membrane switch	It is appeared 2 minutes after failure occurred.
F01 (With continuous beep sounds)	Exhaust temperature exceeds 120°C	1. Burning food in the oven due to over cook	It is appeared when exhaust temperature exceeds above 120°C.
F03	Input voltage exceed + 12.5%	1. Increase in power source voltage	It is appeared when the unit is plugged in. Note that it returns normal operation mode by tapping the STOP pad.
F04	Input voltage is less than — 12.5%	1. Decrease in power source voltage	It is appeared when the unit is plugged in. Note that it returns normal operation mode by tapping the STOP pad.
F05	Memory failure	1. Digital programmer circuit failure	
No display	1.25A fuse blown	1. Low-Voltage transformer failure	
No display	1.25A fuse is OK	1. Thermal cutout failure 2. Low voltage transformer failure 3. Digital programmer circuit failure	
F81	No voltage supply to high voltage trans. (lower/left)	1. Relay failure RY-3 (A) 2. Loose connector CN256, CN257 3. Digital programmer circuit failure	It is appeared when failure occurred.
F82	No voltage supply to high voltage trans. (lower/right)	1. Relay failure RY-5 (B) 2. Loose connector CN258, CN259 3. Digital programmer circuit failure	It is appeared when failure occurred.
F83	No voltage supply to high voltage trans. (upper/left)	1. Relay failure RY-7 (C) Loose connector CN260, CN261 2. Digital programmer circuit failure	It is appeared when failure occurred.
F84	No voltage supply to high voltage trans. (upper/right)	1. Relay failure RY-9 (C) Loose connector CN262, CN263 2. Digital programmer circuit failure	It is appeared when failure occurred.
F86	Shorted contacts of RY-3	1. Relay failure RY-3 (A) 2. Digital programmer circuit failure	It is appeared when failure occurred.
F87	Shorted contacts of RY-5	1. Relay failure RY-5 (B) 2. Digital programmer circuit failure	It is appeared when failure occurred.
F88	Shorted contacts of RY-7	1. Relay failure RY-7 (C) 2. Digital programmer circuit failure	It is appeared when failure occurred.

DISPLAY	CONDITIONS	POSSIBLE CAUSE	TIMING OF FAILURE INDICATION
F89	Shorted contacts of RY-9	1. Relay failure RY-9 (D) 2. Digital programmer circuit failure	It is appeared when failure occurred.

[TROUBLE] Oven does not operate at all or oven does not start cooking. NE-2180, NE-2180C

DISPLAY	CONDITIONS	POSSIBLE CAUSE	TIMING OF FAILURE INDICATION
F33	Open temperature sensor (exhaust)	1. Temperature sensor failure 2. Digital programmer circuit failure 3. Loose connector CN5	It is appeared when failure occurred.
F34	Short temperature sensor (exhaust)	1. Temperature sensor failure 2. Digital programmer circuit failure	It is appeared when failure occurred.
F44		1. Shorted membrane switch	It is appeared 2 minutes after failure occurred.
F01 (With continuous beep sounds)	Exhaust temperature exceeds 120°C	1. Burning food in the oven due to over cook	It is appeared when exhaust temperature exceeds above 120°C.
F03	Input voltage exceed + 12.5%	1. Increase in power source voltage	It is appeared when the unit is plugged in. Note that it returns normal operation mode by tapping the STOP pad.
F04	Input voltage is less than — 12.5%	1. Decrease in power source voltage	It is appeared when the unit is plugged in. Note that it returns normal operation mode by tapping the STOP pad.
F05	Memory failure	1. Digital programmer circuit failure	
No display	1.25A fuse blown	1. Low-Voltage transformer failure	
No display	1.25A fuse is OK	1. Thermal cutout failure 2. Low voltage transformer failure 3. Digital programmer circuit failure	
F81	No voltage supply to high voltage transformer. (left)	1. Relay failure RY-3 (A) 2. Loose connector CN256, CN257 3. Digital programmer circuit failure	It is appeared when failure occurred.
F84	No voltage supply to high voltage transformer. (right)	1. Relay failure RY-9 (C) 2. Loose connector CN262, CN257 3. Digital programmer circuit failure	It is appeared when failure occurred.
F86	Shorted contacts of RY-3	1. Relay failure RY-3 (A) 2. Digital programmer circuit failure	It is appeared when failure occurred.
F89	Shorted contacts of RY-9	1. Relay failure RY-9 (D) 2. Digital programmer circuit failure	It is appeared when failure occurred.

17 PARTS LIST

NOTE

When ordering replacement part(s), please use part number(s) shown in this parts list.

Do not use description of the part.

Important safety notice:

Components identified by \triangle mark have special characteristics important for safety.

When replacing any of these components, use only manufacturer's specified parts.
